ABSTRACT

IDENTIFIERS

This report provides data and recommendations on the workload and productivity of University of Maryland System (UMS) faculty. It outlines the state budgetary policy that mandates the report and explains UMS policy on faculty workload. The data in the report reflect teaching standards in place in 1993-94, prior to the adoption of the current UMS workload policy. Institutional and composite data provide information on: (1) the number of faculty who trught the standard load; (2) the number granted exceptions from the standard load; (3) the number of course-equivalent units taught; and (4) faculty research, publications, presentations, and service. The report found that, of the 3,759 full-time faculty at UMS institutions, 1,137 were granted exceptions from teaching the standard load. More than half of these exceptions were for departmental administration, externally funded research, and for instruction-related reasons. The overall data indicate that UMS teaching productivity is comparable to those at similar institutions nationwide. Three appendixes provide a copy of the UMS policy on faculty workload and responsibilities, a timeline on the development of the policy, and a copy of the survey form and instructions. (MDM)

University of Maryland System Administration December 1, 1994

I. INTRODUCTION

As a family of institutions, the University of Maryland System is committed to ensuring the quality, accountability, and efficiency of its operations. Toward these ends, the UMS Regents adopted a policy on faculty productivity and a reporting format to monitor its implementation. The UMS is pleased to submit the first of the required annual reports and a description of its key features.

Faculty productivity is a complex issue currently debated in the halls of academe and in state legislatures across the country. An effective workload policy must strike a critical balance between providing meaningful measures of workload (for purposes of both internal management and external accountability) and recognizing the vast differences among institutions, departments, and individual faculty members. Moreover, an ideal policy should encourage faculty initiative and creativity and enhance the quality of their teaching, research, and service.

In developing a policy and reporting mechanism, the UMS reviewed similar efforts in many other states. While our policy may not be ideal, we believe that we have developed the best approach presently available. In this regard, we expect to "become a model for American higher education," as stated in our vision statement.

II. MARYLAND GENERAL ASSEMBLY'S REQUEST

The Joint Chairmen's Report included in the FY 1995 budget passed by the Maryland General Assembly states:

"SECTION XX. AND BE IT FURTHER ENACTED. That the following amounts, representing the growth in revenue from tuition and fee increases, may not be expended until the budget committees receive a policy and report on faculty workload. The policy shall establish standards for teaching loads and provide for specific exceptions to those standards. The report shall indicate the number of faculty meeting the standard and the number given specific exceptions, by type of exception (i.e., research grant, administrative responsibilities, public service, etc.). All faculty, not only tenure and tenure-track, shall be included in the report. Each institution shall submit a report by academic department. Once the report, due December 1, is received, the committees shall have 45 days for review.

Baltimore City Campus	2,698,469
College Park Campus	9,808,713
Bowie State University	1,262,047
Towson State University	2,412,655
Eastern Shore Campus	129,733
Frostburg State University	604,047
Coppin State College	36,284

University of Baltimore	683,694
Salisbury State University	614,126
Baltimore County Campus	1,598,275
St. Mary's College of Maryland	1,151,001
Morgan State University	465,745

Explanation: The committees appreciate the efforts undertaken to quantify and report on faculty workload. However, the committees do not believe that what has been reported to-date provides them with assurances that the institutions are carefully examining what faculty do or evidence that reductions in teaching loads are balanced by equally important responsibilities for scholarship, public service, or administration. The committees request that the University of Maryland System, St. Mary's College and Morgan State University work with the Maryland Higher Education Commission to develop policies and reporting mechanisms in these areas."

III. UMS POLICY ON FACULTY WORKLOAD

On August 19, 1994 the University of Maryland System Board of Regents approved the "Policy on Faculty Workload and Responsibilities." Designed to respond to the Joint Chairmen's language, the policy established standards for teaching loads, provided for specific exceptions to those standards, and provided for accountability. A copy of the policy is included as Attachment A.

Development of the Policy. The UMS policy was developed over a period of three months in consultation with a specially constituted advisory committee of academic vice presidents and representatives of the Council of University System Faculty. Attachment B is a time line of the process followed in the development and adoption of the UMS faculty workload policy. There were extensive consultations with the Maryland Higher Education Commission's staff. Comments from legislative staff were also solicited. The Office of the Attorney General reviewed the policy prior to its adoption by the Regents. On June 14, the legislative budget committees were briefed on the proposed policy at public hearings held in Annapolis. At the hearings, the Secretary for Higher Education testified that the proposed UMS policy was responsive to the language of the FY 1995 budget bill.

<u>Purposes of the Policy.</u> The policy has two purposes:

- To promote optimal performance by UMS faculty; and
- To ensure accountability for that performance.

Centrality of Teaching. The policy reflects the centrality of instruction:

- It mandates that all faculty members, including those with administrative responsibilities at the departmental level, be involved in the instructional program, and
- It mandates that senior faculty in departments with undergraduate programs participate in undergraduate teaching.

At the same time, the policy acknowledges the significant roles of research, scholarship, and service.

Whom Does the Policy Cover? ALL faculty members are covered, with the following exceptions:

- Individuals with faculty rank assigned administrative duties <u>outside</u> the department (deans, vice presidents, presidents), and
- Research associates whose salaries are fully supported by non-state funds.

Specific Guidelines. The following teaching guidelines are included in the policy:

- Faculty at the UMS comprehensive institutions (Bowie, Coppin, Frostburg, Salisbury, Towson, University of Baltimore, and UMES) should teach 7-8 course units each academic year. They are expected to devote 65-75% of their time to instruction, 15-25% to research and scholarship, and 5-15% to service;
- Faculty at the UMS research institutions (UMAB, UMBC, and UMCP) should teach 5-6 course units each academic year. They are expected to devote 45-55% of their time to instruction, 35-45% to research and scholarship, and 5-15% to public service; and
- Faculty at CEES and UMBI are expected to devote 5-15% of their time to instruction, 75-85% to research, and 15-25% to service.

These guidelines are fully consistent with the American Association of University Professors' standards for maximum teaching loads.² The professional schools

¹instruction includes, in addition to classroom time, student advising and all activities necessary to the preparation, delivery, and evaluation of instruction and learning.

²*Statement on Faculty Workload,* Policy Documents and Reports, AAUP, Washington, D.C., 1990, 163-166.

(medicine, dentistry, pharmacy and law), given their heavy emphasis on clinical instruction, are not covered by these guidelines, but are required to establish their own workload policies, subject to approval of the Chancellor.

Exceptions. The policy allows for limited exceptions to these workload expectations; institutions are to make only those exceptions absolutely necessary to fulfill institutional missions. The policy allows for exceptions due to:

- Additional demands resulting from class size, development of new courses, special methods of instruction, level of instruction, discipline, and accreditation requirements;
- Fiesponsibilities as department chair, assistant chair, or program director; and
- Assignment of additional time for research or such service activities as working with public schools, or with business and industry.

Accountability. Key to the policy are its accountability provisions. Accountability for institutional adherence to the policy rests with the presidents. They are charged with establishing, subject to the approval of the Chancellor, institutional faculty workload policies compatible with the system policy and with their own institutional missions. The main features of the accountability provisions are:

- All faculty will be given workload expectations in accordance with departmental, institutional, and system policies;
- Faculty members will be reviewed annually throughout their employment based on institutional procedures;
- As part of that review, actual performance will be compared with workload expectations;
- Faculty reviews and subsequent actions will reflect fully the results of these comparisons and will be taken into account in the institution's faculty reward structure; consequences for failure to fulfill expectations will be established.

The policy also requires each president to submit annual faculty accountability reports to the Chancellor for delivery to the Board of Regents and to the State.

Implementation. The expectations included in the system policy will be fully implemented in the academic year 1995-1996, (class schedules and instructional assignments for 1994-1995 had been set by the time the Regents approved the

policy).

IV. KEY FEATURES OF THE UMS FACULTY WORKLOAD REPORT

The UMS implemented a process to collect data required by the Joint Chairmen's Report. In developing the data reporting format, MHEC and legislative staffs were consulted, and their suggestions and comments were incorporated. The data format was also presented to the joint committees at the June 14 nearings in Annapolis, and was generally acknowledged as being responsive to the requirements of the FY 1995 budget bill. Attachment C is a copy of the format and the accompanying detailed instructions. As in the policy, a "course unit" was defined as equivalent to a three-credit course. Graded instructional experiences that do not follow the traditional course format (e.g., individual studies, supervision of dissertation research, supervision of student teaching, etc.) were converted to course units using the set of weights incorporated in the policy. The following are the main features of the data format:

- It includes data on ALL faculty, as specified in the budget language;
- It conforms to the 1993-1994 standard load for each department, and it includes the basis for this standard;
- It provides the number of faculty who taught the standard load in place in the 1993-1994 academic year (which is not necessarily the expected load called for in the Regents' policy) and the number granted exceptions to that standard, by type of exception, as specified in the budget language;
- It provides the number of course-equivalent units taught by the faculty;
- It provides the number of courses faculty were excepted from teaching, by type of exception; this information was added at the request of the MHEC:
- It provides for faculty productivity in areas other than instruction, i.e., scholarship, research and service; and
- It provides data by department, as specified in the budget language.

<u>Limitations.</u> There are several limitations inherent in the reporting format and in the data:

- THE DATA IN THE REPORT REFLECT TEACHING STANDARDS IN PLACE IN ACADEMIC YEAR 1993-1994, PRIOR TO ADOPTION OF THE UMS WORKLOAD POLICY, SINCE IT WAS ADOPTED IN AUGUST OF 1994. THE REPORT THUS PROVIDES BASELINE DATA FROM WHICH FUTURE INCREASES IN PRODUCTIVITY MAY BE MEASURED OVER TIME:
- The format did not include a question on "full-time equivalent faculty," but rather on the number of persons. This approach was necessitated by the need to identify "exceptions" to the expected load; this means that it would be erroneous to multiply the number of courses expected to be taught by the headcount faculty to obtain the total number of courses that could have been taught. This report provides an alternative and valid methodology;
- The format did not include a question on the number of faculty who taught MORE courses than the standard load;
- Since this format was not appropriate for the professional schools (medicine, law, dentistry, pharmacy), with their heavy emphasis on clinical instruction, they provided data in a different format;
- Most UMS institutions classify their department chairs as faculty for federal reporting purposes (Integrated Postsecor.dary Education Data System IPEDS) and give them release time from teaching; hence these individuals appear as "exceptions" in this report. UMCP, and to a large extent UMBC, on the other hand, classify department chairs as administrators for IPEDS; thus, they are not included in the "exceptions" category.

The data by department, as requested by the budget language, are appended to this report as Attachment D.

V. HIGHLIGHTS OF THE DATA REPORTED BY THE DEPARTMENTS

Tables 1 through 4 provide a summary of the data provided by the institutions. These tables do not include data-for part-time faculty nor from teaching assistants, since they do not have a "standard" load.

<u>Overall Summary.</u> Table 1 is an overall summary of the number of faculty who were given exceptions to teaching the standard load, and the number of exceptions to the standard teaching load.

- 19,382 course units were taught by the tenured, tenure-track, and other full-time faculty in the UMS degree-granting institutions; seventy-seven additional course units were taught by CEES and UMBI's faculty;
- The tenured, tenure-track, and other full-time faculty at the degreegranting institutions were released from teaching 2,844 course units, or 13% of all course units that they could have taught; and
- Of the 3,759 tenured, tenure-track and other full-time faculty at the UMS degree granting institutions, 1,137 were granted exceptions from teaching the standard load; more than half (56%) of these exceptions were for departmental administration, for externally funded research, and for instruction-related reasons (class size, development of new courses, distance education, level of instruction, etc.);

<u>Analysis of Course Exceptions by Type.</u> Table 2 is an analysis of the number of exceptions to the expected teaching load by type:

- 23% of the courseload exceptions (NOT of the number of faculty) were for faculty members on sabbatical; as shown in Table 3, the *number* of faculty on either one semester or one year sabbatical was 201, about 6% of all tenured and tenure-track faculty and departmental administrators;
- Departmental administration accounted for 21% of the courseload exceptions, mostly in those UMS institutions (generally, the comprehensive institutions) which classify department chairs as "faculty with release time:"
- Externally funded research accounted for 18% of the courseload exceptions; most of these exceptions were found in the UMS research institutions;
- Instruction-related demands accounted for 11%, "other" for 12%, and service for 9% of the courseload exceptions. Almost half of the faculty with courseload exceptions due to "other" were on sick/maternity leave, or died during the school year; 28% of the "other" were misclassifications (e.g., faculty on leave without pay who should not have been included, faculty assigned to administrative duties outside the department, etc.).

Non-Instructional Productivity. Table 4 is a summary of the UMS faculty non-instructional (mostly scholarly) productivity. The reporting time frame for these data (1992-1993) is different from the time frame for the instructional data (1993-1994). However, the data provide a more complete picture of the productivity of the UMS faculty:

- \$269 million was obtained by the UMS institutions in externally funded research and training grants awarded to faculty members (this figure does not include institutional grants such as Title III);
- The UMS faculty published more than 800 books, close to 9,000 peer reviewed articles, and made more than 10,000 professional presentations; and
- The UMS faculty spent more than 60,000 days in service to business, government, schools, their institutions, and their profession about 15 days a year per tenured and tenure track faculty member.

Departmental Summary. A set of institutional tables summarizes the departmental data. For each department, the following data are included: the standard teaching load of the tenured and tenure-track faculty, and the total number of course exceptions, the number of faculty who taught the standard load or more, the number of faculty granted course exceptions, and selected indicators of non-instructional productivity, e.g., books published, grants and contracts. The departments are grouped by general discipline area (humanities, sciences, education, etc.).

- At the comprehensive institutions, the standard teaching load in the 1993-1994 academic year was 8 courses across most departments (with such exceptions due to accreditation standards);
- There were more departmental variations in standard teaching load at the research institutions national practices in similar departments in other research universities being the major determinant of workload. Generally, departments with lower teaching loads reported larger amounts of funds received in grants and contracts. These departments tend to be concentrated in the sciences.

VI. CONCLUSIONS AND NEXT STEPS

The UMS has complied with the Fiscal Year 1995 budget language: the Regents have adopted a faculty workload policy which is responsive to the legislative concerns, and the data requested in the Joint Chairmen's Report is being provided to MHEC and the legislative staffs.

The data reported by the institutions suggest some further refinements to the reporting format, which will help ensure better accountability for the performance of the faculty:

- The format should include the number of "full-time equivalent faculty" as a global measure of resources available to the department;
- The format should include the number of faculty who taught more than the standard load:
- Institutions should review the status of individuals who appear to be improperly classified as faculty.

In previous reports to the General Assembly, the UMS has shown that its faculty's teaching productivity is comparable to national practices. This report points up areas that require further consideration. To achieve the Regents' policy's objective of promoting optimal performance by UMS faculty:

- Additional responsibility is being placed on the department chairs to assure that departmental teaching, research, and service responsibilities are met. Professional development workshops for department chairs (successfully introduced at the request of CUSF this Fall), should be continued;
- Departmental exceptions to the expected teaching load included in the institution's policy should be kept to a minimum and fully justified;
- The Chancellor will review the departmental exceptions to the institution's policy and their rationale, and will report his findings to the Regents;
- The Chancellor will review annually the number of courseload exceptions, as well as the number of faculty granted exceptions, and will report his findings to the Regents;
- The number of course units taught, particularly those related to the availability of required undergraduate courses will be reviewed.
- It is intended that these data and those from subsequent reports will provide the basis for the UMS President, in consultation with the Chancellor, to make any necessary adjustments to the number of exceptions to expected teaching loads.

This report represents only a first step. The information collected for academic year 1993-1994 will provide baseline data against which we can measure the effects of the implementation of the Regents' policy. The UMS policy, when fully implemented in 1995-1996, should result in an increase in the instructional productivity of the faculty. Equally important, it will serve as the mechanism to assure the Governor, the General Assembly, and the public that the UMS is truly accountable in the area of faculty workload.

II - 1.25 - POLICY ON FACULTY WORKLOAD AND RESPONSIBILITIES

(Approved by the Board of Regents, August 19, 1994)

I. Purposes

The purposes of the "UMS Policy on Faculty Workload and Responsibilities" are to promote optimal performance by the University of Maryland System and by each of its institutions in meeting the needs and expectations of its students and other clienteles, and to provide mechanisms that will ensure public accountability for that performance. Because faculty are the primary performers of the System's instruction, research/scholarship and service, the policy must encourage and support faculty in applying their creativity, ingenuity, initiative, knowledge, experience, and professional skills in performing many diverse functions. Faculty are expected to meet their responsibilities independently and in full accord with both institutional expectations and established tenets of academic freedom.

This policy reflects the centrality of instruction at degreegranting institutions while acknowledging the essential development of knowledge through research/scholarship and its application to societal needs.

II. Application

The policy applies to the following individuals:

- All persons holding tenured and tenure-track positions who are classified as faculty (instructional, research and public service) and are so reported to the Maryland Higher Education Commission through the Employee Data System;
- 2. All persons who, while holding faculty rank, are classified as administrators and are so reported to the Maryland Higher Education Commission through the Employee Data System, and perform their administrative duties at the level of academic department or equivalent academic unit, including chairs, assistant chairs, program director, etc.;
- 3. All persons who, while neither tenured nor on the tenure track, are employed full time by the UMS, are classified as instructional faculty and are so reported to the Maryland Higher Education Commission through the Employee Data System; and

4. All persons who, while neither tenured nor on the tenure track, are employed full time by the UMS, are classified as research faculty and are so reported to the Maryland Higher Education Commission through the Employee Data System, and whose salaries are supported, in whole or in part, by state funds.

The University of Baltimore Law School and the University of Maryland at Baltimore schools of law, medicine, dentistry and pharmacy shall develop separate policies for their faculties. These policies, subject to the approval of the Chancellor, shall provide accountability fully comparable to that provided in this policy.

This policy does not apply to individuals who hold faculty rank but who are assigned to administrative duties outside the department or equivalent academic units, for example, deans, vice presidents, presidents, etc.; nor does it apply to individuals who are classified as research faculty but whose salary is fully supported by non-state funds, e.g., federal research grants.

III. Responsibilities

Each institutional president shall establish, in consultation with faculty and academic administrators, and subject to approval by the Chancellor, institution-specific policy and implementation mechanisms consistent with the University of Maryland System's "Policy on Faculty Workload and Responsibilities." Institution-specific policies, including proviso for departmental/school variation, shall include explicit statements of expectations and accountability mechanisms, including the means for comparing faculty performance with workload expectations and reporting the results of such comparisons.

IV. Standard Workload Expectations

Each institution's policy shall include standard expectations for faculty workload. It is understood that there will be exceptions and that those exceptions will be both accounted for and justified. Generally, standard expectations will cover instruction, research/scholarship, and service, and will be consistent with the mission of the institution. The proper balance among instruction, scholarship/research, and service for an individual faculty member may change over the faculty member's career. For each individual faculty member, a publication difference between the actual and the standard expectation for any basic workload element will be balanced by

ERIC AFUIL TEAK Provided by ERIC

compensating changes in one or both of the other basic workload elements. Workload expectations for each faculty member should be reviewed annually by the responsible department chair and/or other appropriate administrator and adjusted as necessary and appropriate. The following table provides guidelines for the general standard expectation in the categories of instruction, research/scholarship and service. It is understood that there may be differences across departments of an institution, as approved by the president.

INSTITUTION TYPE	INSTRUCTION*	RESEARCH/ SCHOLARSHIP	SERVICE
COMPREHENSIVE OF TOTAL EFFORT COURSE UNITS/YR	65-75 7-8	15-25	5-15
RESEARCH OF TOTAL EFFORT COURSE UNITS/YR	45-55 5-6	35-45	5-15
NON-DEGREE GRANTING SOF TOTAL EFFORT	5-15	75-85	15-25

^{*}Including directed research and individual studies.

Instructional effort includes, in addition to classroom time, all concomitant activities necessary to the preparation, delivery and evaluation of instruction and learning, including the various forms of student advising. The sum of the "% of total effort" in each area must equal 100% for each individual faculty member.

For purposes of defining standard instructional load expectations, the course unit is defined as equivalent to a three-credit course. Individuals whose instructional load includes other than three-credit courses will have their standard instructional load expectations defined accordingly.

The following weights should be used to convert graded instructional experiences that do not follow the traditional course format (e.g., individual studies, supervision of dissertation research, etc.) to course units.

Course Level	N of Credits = 1 Course Unit
800-899 (dissertation & doctoral level individual studies)	10 credits = 1 course unit
799 (masters thesis)	13 credits = 1 course unit
500-798 (other graduate level individual studies)	18 credits = 1 course unit
400-499 (graduate/undergraduate level individual studies)	21 credits = 1 course unit
100-399 (undergraduate level individual studies)	30 credits = 1 course unit

Workload expectations for each faculty member in the areas of research/scholarship and service shall be specified according to institutional mission.

In order to focus on the centrality of instruction, all faculty members, including those with administrative responsibilities at the departmental level, shall be involved in the instructional program. Further, senior faculty in departments having undergraduate programs shall participate in undergraduate teaching.

V. Exceptions to Standard Workload Expectations.

All faculty at degree-granting institutions are expected to be involved in instruction, research/scholarship and service as previously defined. Recognizing that some faculty will assume new or additional responsibilities in any one of these areas, exceptions to the standard workload may be made. However, the department is responsible for making the necessary adjustments that departmental workload 50 total faculty expectations in each of these areas are fulfilled. These expectations will be determined by student and curricular needs, shall be consistent with the resources available to the the president. approved py shall be department, and Institutions shall make the minimum number of exceptions necessary for fulfillment of its institutional mission. Exceptions to the standard workload may be made based on the following considerations.

1. Instruction. Exceptions from the standard instructional load may be based upon a number of factors, including class size; development of new courses; modality of instruction, including distance education; level of instruction; discipline; accreditation requirements; etc.

- 2. Departmental Administration. Assumption of responsibility for the functions of chair, assistant chair, or program director, or for special departmental projects, may require reduction of expectations for service, research/scholarship or instruction. The magnitude of such reduction shall be dependent on the scope of administrative responsibilities and size of the department.
- Assignment of additional time for research or service activities can be supported by external funds, either research or training grants. In these instances, the accompanying reduction of expectations for service or instruction should mirror the replacement of departmental salary support by externally-funded salary support.
- 4. Department-Supported Research. (Departmental Research). Assignment of additional time for research activities supported by the department and consequent reduction of expectations for service or instruction should be related to the institution's mission.
- 5. Department-Supported Service. Assignment of additional time in areas of service and consequent reduction of expectations for research/scholarship or instruction should be directly related to the duration and the extent of the commitment. For example, individual faculty members may be released from the standard expectation in the areas of research/scholarship or instruction in order to make major professional contributions -- e.g., to work in partnership with the public schools or with business or industry.

VI. Accountability

The institutional reward structure will take cognizance of the workload assignment for each faculty member. Institutions shall develop procedures for the systematic review of faculty, recognize outstanding performance, and establish consequences for failure to fulfill expectations.

The focus of external accountability (to the Regents and to the State) will be the department or academic unit, not the individual faculty member. The primary means for ensuring proper accountability will be after-the-fact reporting of actual departmental performance in comparison with the expectations previously approved by the president. Each president shall submit annually to the Chancellor an accountability report in a form to be developed by the Chancellor.

DEVELOPMENT OF THE UMS POLICY ON FACULTY WORKLOAD AND RESPONSIBILITIES

March 17	-	"Framework" for Board of Regents Policy (dated March 17) submitted to Advisory Team. Product: draft of "Regents' Policy on Faculty Productivity," dated March 27.
March 24	•	Legislative hearings on faculty workload.
March 31	-	Discussion with Academic Vice Presidents (AAAC), the executive committee of the Council of University System Faculty (CUSF), and the Advisory Committee. Draft policy dated March 27 reviewed. Product: "Proposed UMS Policy on Faculty Workload and Responsibilities," dated April 4.
April 4	•	Chancellor's Council (UMS Presidents) discussed draft policy dated April 4.
April 7	•	Board of Regents' Education Policy Committee briefed on draft policy dated April 7.
April 8	•	Draft policy dated April 8 formally transmitted by the Chancellor to the Presidents. Copies shared with legislative and MHEC staff. Meeting held with UMSA and MHEC staff to discuss draft.
April 25	-	April 25 draft of policy (which incorporated legislative and MHEC staff's comments) presented to AAAC. Product: Draft dated April 27. This draft was discussed with MHEC staff and formally transmitted to Secretary Aery for her comments.
May 2	•	April 27 draft of policy presented to the Chancellor's Council. Product: "Departmental variations" added to draft policy dated May 9.
May 9	-	May 9 draft reviewed by AAAC.
May 11	-	May 9 draft reviewed by CUSF.
May 12	•	May 9 draft forwarded to Secretary Aery.
May 13	-	Letter from Secretary Aery with her comments on draft dated April 27 received by Chancellor Langenberg.

Draft dated May 16 (which incorporates most of the suggestions May 16 from CUSF) presented to the Advisory Committee. Proposed policy referred, for action, to the Board of Regents' May 26 Education Policy Committee. Opinion is requested from the Attorney General's Office of May 27 the proposed policy. Legislative hearings on faculty workload continue. Proposed June 14 policy presented to the budget committees. Board of Regents adopts "Policy on Faculty Workload and August 19 Responsibilities."

THE UNIVERSITY OF MARYLAND SYSTEM FALL 1993 - SPRING 1994 REPORT ON FACULTY TEACHING LOAD

- INSTRUCTIONS AND DEFINITIONS -

- 1. **Time frame**. The time period covered by this report is Fall 1993 and Spring 1994.
- 2. **Type of Faculty**. All information is requested by type of faculty. The last column provides for departmental totals.

<u>Tenured and Tenure-Track Faculty</u>. All persons holding tenured and tenure-track positions who are classified as faculty (regardless of sub-classification: instructional, research and public service), and are so reported to the Maryland Higher Education Commission through the Employee Data System.

<u>Departmental Administrators</u>. All persons who, while holding faculty rank, are classified as administrators and are so reported to the Maryland Higher Education Commission through the Employee Data System, and perform their administrative duties at the level of academic department or equivalent academic unit, including chairs, assistant chairs, program director, etc.;

<u>Full-Time, Non-Tenured, Non-Tenure Track Instructional Faculty</u>. All persons who, while neither tenured nor on the tenure track, are employed full time by the UMS, are classified as instructional faculty and are so reported to the Maryland Higher Education Commission through the Employee Data System.

Full-Time Non-Tenured, Non-Tenure Track Research or Public Service Faculty. All persons who, while neither tenured nor on the tenure track, are employed full time by the UMS, are classified as research or public service faculty and so reported to the Maryland Higher Education Commission through the Employee Data System, and whose salaries are supported, in whole or in part, by state funds.

Other Faculty. All other persons, other than teaching assistants, who taught in this department, either in one or in both semesters. This category includes adjunct and affiliated faculty, all part-time faculty, and non-departmental administrators (deans, assistant deans, etc.) who taught in this department. The only information required for this type of faculty is their number, the number of courses and course units taught, and the student credit hours generated.

<u>Teaching Assistants</u>. Typically, graduate students in the department whose tuition and fees are waived, and who may receive other remuneration in return for some type of instruction-related responsibilities within the department. The

- only information required for teaching assistants is their number, the number of courses taught, and the student credit hours generated.
- 3. Basis for Departmental Expected Teaching Load. Very briefly, describe the basis for the department expected teaching load for core faculty. For example, institutional policy; national practice; accreditation requirements; etc.
- 4. Line 1: Number of Headcount Faculty. Include faculty who were on sabbatical, or employed for only one semester. Faculty who held a joint appointment in another department or UMS institution should be reported as a fraction based on their appointment to the reporting department.
- 5. Line 2: 93-94 Standard Annual Course Units Load. The number of course units that each faculty member was expected to teach during the academic year 1993-1994. Standard loads may differ by type of faculty. For purposes of defining standard instructional workload expectations, the course unit is defined as equivalent to a three-credit course. Departments which formulate this expectation in terms of credit hours, should convert the expected teaching load, for reporting purposes, to courses; e.g., 24 credit hours being equivalent to 8 courses.

The following weights should be used to convert graded instructional experiences that do not follow the traditional course format (e.g., individual studies, supervision of dissertation research, supervision of student teaching, etc.) to course units.

Course Level	N of Credits = 1 Course Unit
800-899 (dissertation & doctoral level	
individual studies)	10 Credits = 1 Course Unit
799 (masters thesis)	13 Credits = 1 Course Unit
500-798 (other graduate level	
individual studies)	18 Credits = 1 Course Unit
400-499 (graduate/undergraduate level	
individual studies)	21 Credits = 1 Course Unit
100-399 (undergraduate level	
individual studies)	30 Credits = 1 Course Unit

6. Line 3: Number of Courses Taught on Load. The total number of courses taught on load by each type of faculty. A course should be attributed to only one faculty. The attribution of team taught courses and courses taught with the assistance of teaching assistants is to be decided by the department chair, dean, or provost. If a faculty member appointed solely to this department taught a course in another department, such course(s) should be included here.

- 7. Line 4: Number of Other Course Units Taught. See table in 5 above for the weights that should be used to convert graded instructional experiences that do not follow the traditional course format (e.g., individual studies, supervision of dissertation research, etc.) to course units. If a faculty member appointed solely to this department taught a course unit in another department, such course unit(s) should be included here.
- 8. **Line 5: Number of Student Credit Hours.** The total number of student credit hours generated by each type of faculty.
- 9. Line 6: Number of Courses Taught on Overload. The total number of courses taught on overload (for remuneration above base salary) by each type of faculty. This item is not applicable to part-time faculty nor to teaching assistants.
- 10. Line 7: Number of Faculty Who Taught Standard Load or More. Number of faculty members who taught the number of course units specified in line 1.
 - Note: Part-time core faculty, full-time faculty employed for only one semester, faculty on leave without pay, and faculty who held a joint appointment in another department or UMS institution, and whose teaching load was proportional to the standard load should be included here. For example, a part-time core faculty employed half-time who taught half the standard load should be included here. Similarly, individuals whose appointments are supported in whole or in part by Agricultural Experiment Station or Cooperative Extension Service's funds, and whose teaching load was proportional to the standard load should also be included here. For example, a faculty member half of whose salary was paid with Cooperative Extension Service funds, and who taught half the standard load should be included here.
- 11. Line 8: Number of Faculty Exempted from Teaching Standard Load. The number of faculty members who did not teach the course units specified in line 2. (Note: line 7 + line 8 = line 1.)
- 12. Lines 9 through 17: By Type of Exception (N of Faculty | Total Course Reduction). The faculty members reported in line 8 should be distributed according to the principal reason for their not teaching the course units specified in line 2. When more than one type of exception applies, the one accounting for most of the faculty member's reassigned time should be used. (Note: addition of number of faculty in lines 9 through 17 = line 8). The total course reduction for each exception category should also be reported. For example, if one tenured professor was released of teaching two courses to develop a new course, and a tenure-track assistant professor was released of teaching one course to teach a course on an off-campus center, the entries in

"Instruction-Related" (line 9), under "Core Faculty," would be 2 | 3 (e.g., two faculty members were released from teaching three courses).

<u>Line 9: Instruction</u>. Exceptions from the standard teaching load based upon instruction-related factors, including class size; development of new courses; modality of instruction, including distance education; level of instruction; etc.

<u>Line 10: Departmental Administration</u>. Assumption of responsibility for the functions of chair, assistant chair, or program director, or for special departmental projects¹.

<u>Line 11: Externally Funded Research and Service Activities.</u> Assignment of additional time for research or service activities supported by external funds, either research or training grants.

<u>Line 12: Department-Supported Research.</u> (Departmental Research). Assignment of additional time for research activities supported by the department.

<u>Line 13: Department-Supported Service - Profession</u>. Assignment of additional time to serve in areas of service to the profession; e.g., as editor of a large journal.

<u>Line 14: Department-Supported Service - Internal</u>. Assignment of additional time in areas of service to the institution/system to serve in committees, as chair of faculty senate, etc.

<u>Line 15: Department-Supported Service - Public</u>. Assignment of additional time in areas of service to the public: schools, business, government, and non-profit organizations.

<u>Line 16: Sabbatical</u>. Exempted from teaching (either for a semester or for the entire academic year) by reason of being on sabbatical.

<u>Line 17: Illness/Death/Other</u>. If "other", specify for each faculty exemption falling in this category.

13. Lines 18 through 27: Non-Instructional Productivity. Summary of the non-instructional productivity of the departmental faculty. These data are collected through the Survey of Faculty Non-Instructional Productivity.

¹This category is applicable to those institutions who do not classify their department chairs as "administrators", but as faculty with released time for administration. It is not applicable to faculty who are classified as administrators (second column).

Line 18: Number of books published, including textbooks and edited works.

<u>Line 19</u>: Number of refereed works (such as journal articles, poems, short stories, etc.) published, including chapters in books.

<u>Line 20</u>: Number of non-refereed works published by commercial and non-commercial organizations, including newspaper articles.

<u>Line 21</u>: Number of creative activities ("non-verbal research") completed or in which the faculty member had a meaningful participation, including artistic (musical theatrical and dance) performances; art exhibits; recitals; concerts; etc.

<u>Line 22</u>: Number of presentations given to conferences, seminars, etc. sponsored by professional associations.

<u>Line 23</u>: Number of externally funded research and training grants received this year.

<u>Line 24</u>: Number of faculty members in the department who were awarded externally funded research and training grants.

<u>Line 25</u>: Total dollar amount expended this fiscal year from all externally funded research and training grants awarded to faculty members.

<u>Line 26</u>: Number of days spent in public service with public school systems, government agencies, non-profit organizations, and businesses.

<u>Line 27</u>: Number of days spent advising/supporting campus-based student organizations.
